1 Migration Planning
A thorough migration plan begins with assessing the current Tableau Server environment, rationalizing content, and ensuring deployment readiness to create a tailored, efficient transition plan.

2 Implementation
Skilled Tableau architects manage the migration, using automated tools and conducting quality assurance checks to ensure a seamless transition of content within the specified timeframe.

3 Ongoing Support
Monitoring, user communication, training on new features like Tableau Pulse, and guidance on governance and data integration to optimize the Tableau Cloud experience.
